

Insights on the Impact of Data Breaches

Highlights From Kiteworks 2024 Sensitive Content Communications Privacy and Compliance Report

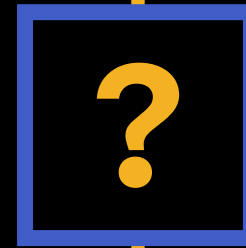

PREMISE

Sensitive Data Breaches Pose Serious Privacy and Compliance Risks

32%

of Organizations Said They Had 7+ Sensitive Content Communication Breaches in the Past Year

9% of respondents said they "don't know" how many breaches occurred

There was a slight decrease from 2023, where 36% reported they had 7+

42% of security and defense firms admitted to 7+

17% of federal government respondents said they had 10+

APAC had the most serious breach numbers: 43% admitted to 7+

Three top attack vectors for data breaches:

- 52% phishing
- 51% malware
- 33% password and credential exploits

26%

of Respondents Said They Paid Over \$5 Million in Litigation Costs Associated With Data Breaches

49% are paying over \$5 million in the most affected industry: Higher education

27% are paying over \$5 million in the most affected region: Americas

24% of organizations with over 30,001 employees said litigation costs were over \$7 million

8% said their legal fees were more than \$7 million

How Kiteworks Protects Against Data Breaches

The Kiteworks Private Content Network (PCN) is wrapped in a hardened virtual appliance

Consolidates all sensitive content communication channels (email, file sharing, SFTP, MFT, web forms, etc.) into one platform

Maintains detailed logs of data access, file transfers, and user activities for real-time monitoring

Uses double encryption and attribute-based access controls to protect sensitive content at rest and in motion

Employs AI-enabled anomaly detection and integrates advanced security capabilities such as DLP, SIEM, etc. for early detection and prevention of potential data breaches
